

The Planche Vision ...

... will soon be reality. Yours, too?

When a referee (1) uses a PDA or mobile phone with **Arbitre** refereeing software, the data can be transmitted wirelessly to **Planche .NET 2010** tournament software. Using macros or add-ins, **Planche .NET** can do whatever you like when data arrives! The Fencing Object Model (**FOM**) offers easy access to all data. The possibilities are limited only by your imagination and skills.

Among the scenarios supported is transferring one bout or pool to another referee (4), changing the strip and reporting technical problems, adding fencers after the round of pools has started, updating displays (2) or a website (3) in realtime, and many more.
